

International Colloquium Mortality Crises in Medieval Western Mediterranean: Sources, Cycles and Socioeconomic Dynamics

IN MEMORIAM
ANTONI RIERA I MELIS

Universitat de Lleida, Facultat de Lletres

28-30 January 2026

Edifici Rectorat, Sala Roberto Fernández (2.26)

This colloquium will focus on some of the fundamental aspects of mortality crises recorded in the western Mediterranean during the medieval period. More specifically, it will address the sources and the initial results of the reconstruction of those cycles in which mortality exceeded ordinary levels as a consequence of sudden events such as epidemics, famines, wars, or natural disasters.

To this end, the scope and limitations of primarily documentary sources providing either direct or more indirect evidence of this sequence of phases of abnormal mortality from the late thirteenth century to the early sixteenth century will be assessed, with particular attention paid to those arising from plague outbreaks and other diseases. This will include obituary books, burial records, and death registers, as well as series of wills and other types of documents such as official correspondence and narrative and iconographic sources. These materials come from a wide range of territories across the northwestern Mediterranean arc, extending from the Italian peninsula to Iberia.

At the same time, the analysis of the factors and dynamics involved in these mortality crises in these same territories will be initiated, alongside an examination of their effects on various socio-economic phenomena. The latter encompasses from the general functioning of the economy to specific markets such as labour and slave markets, levels of inequality, and even the impact of excess mortality as a driver of cultural change.
